

Uncompromised CCI with the AT-Closed Vial®

The AT-Closed Vial® is a unique ready-to-fill **closed** polymer vial. Its design and the Filling Lines that have been developed for it ensure elimination of contamination risk.

Particularly adapted to Cell & Gene Therapies, this technology enables **safe cryogenic storage** of injectable drug products, intermediate drug substances and cell banks.

The robustness of the **container closure integrity (CCI)** in cryogenic temperatures is validated and holistically covered by the vial materials and design, its manufacturing process, and the closed vial filling process.
